Office Hours: Monday - Friday from 7:30 a.m. to 5 p.m. CT

- 1 – Housing
- 2 – Turbine Rotor
- 3 – Rotor Supports
- 4 – Magnetic Pick-up
- 5 – Loading Valve
- 6 – Pressure Sensor
- 7 – Temperature Sensor
- 8 – Internal Pressure Relief not illustrated. Located on back of housing.

Operating Principle

Flo-tech’s portable hydraulic testers simultaneously measure the flow rate, temperature, pressure and, optionally, power of hydraulic fluid. Designed for testing pumps, valves, cylinders, motors, hydrostatic or power shift transmissions, and power steering systems in both mobile and stationary applications, these compact units utilize turbine flow meter technology.

Flow: As fluid passes through the tester, it turns the turbine rotor. As each turbine blade passes the magnetic pick-up, an electrical signal is generated. This frequency signal is proportional to the flow rate and is transmitted to the tester’s electronics for display on a PC screen or the front panel LCD of the tester’s electronic case.

Temperature: All testers contain an internal temperature sensor for measuring the temperature of the fluid as it passes through the flow meter body.

Pressure: Pressure is provided in either analog or digital format, depending on the model of the tester. PFM6 and PFM6BD testers are equipped with helical type pressure gauges, while the PFM8 tester includes a silicon strain gauge pressure sensor and the Flo-Check USB tester utilizes a piezoelectric pressure sensor.

Power: Power measurements are derived from the product of flow and pressure. The Flo-Check USB and the PFM8 are designed to calculate this measurement and display the results in either horsepower or kilowatts. When using the PFM6 or PFM6BD, power can be calculated using the following formulas:

$$\text{H.P.} = \frac{\text{GPM} \times \text{PSI}}{1714} \qquad \text{H.P.} = \frac{\text{LPM} \times \text{Bar}}{447.4}$$

$$\text{kW} = \frac{\text{LPM} \times \text{Bar}}{600}$$

Designed for both ease of operation and safety, all testers feature loading valves with fingertip control and pressure surge protection.

Flo-Check[®] USB Hydraulic System Analyzer

Simultaneously Measures Flow, Pressure and Temperature

- Flow accuracy $\pm 1\%$ of reading @ 32 cSt
- Field selectable US or metric readings
- High and low set point alarms for flow, pressure and temperature
- Captures pressure spikes up to 10,000 PSI (0.2 milliseconds duration)
- Exports saved data to Microsoft Excel[®] and other spreadsheet programs
- USB powered
- Easy to use, plug and play
- Calculates hydraulic power
- Select continuous monitoring or capture data manually
- Logs up to 12 hours
- Records alarm history

The Flo-Check Hydraulic System Analyzer can be used as a stationary or portable tester for both industrial and mobile hydraulic system diagnostics, and analysis of the prognostic health of a hydraulic system. It features flow, pressure and temperature sensors that are monitored by a data acquisition module. This module records the operating parameters of the system and transfers them to the user's laptop via the USB port.

The custom software utility is a Windows[®]-based application which is compatible with Windows Vista[®], Windows XP, Windows 2000, and Windows 7. This intuitive software configures the displayed information into user-selected engineering units and provides real-time graphics with instantaneous readings and trends for all three measurement parameters. The software also permits the data to be saved for export into a spreadsheet program.

The Hydraulic System Analyzer is powered through the USB port of a PC, making it easy to set up and ideal for portable applications. Interfaced to the PC application, the Hydraulic Analyzer offers a straightforward method of monitoring system parameters complete with data acquisition.

SPECIFICATIONS

Performance

Flow:

Accuracy	$\pm 1\%$ of reading @ 32 cSt
Repeatability	$\pm 0.2\%$

Pressure:

Accuracy	$< \pm 0.5\%$ BFSL
Stability	$< \pm 0.25\%$ of full scale
Zero Offset	$< \pm 2\%$ of full scale
TC Zero and TC Span	$< \pm 1.5\%$ of full scale
Response Time	0.2 milliseconds

Temperature:

Calibration Error (25 °C)	± 1 °C
Absolute Error (over full range of sensor, 0 to 150 °C)	
Without Calibration	± 3 °C
With Calibration	± 1.6 °C
Nonlinearity	± 0.4 °C
Repeatability	± 0.1 °C

Data Acquisition:

Sample Rate	10 kHz
PC Screen Update/Record Rate	
Flow	1 second (average 10K samples)
Temperature	1 second (average 10K samples)
Pressure	1 second (min, max, average 10K samples)

Power

USB Power: +5 VDC (supplied through USB port of a PC)

USB Voltage Tolerance: +4.6 VDC min, +5.25 VDC max

Current: 100 mA, typ

Environmental

Pressure Rating: 6000 PSI (414 Bar) maximum with a 3:1 safety factor; capable of 10,000 PSI transients

Operating Pressure: <6000 PSI (414 Bar, 41.4 MPa, 420 kg/cm²); capable of 10,000 PSI transients

Internal Valve By-pass: 7500 PSI Δ P

Pressure Drop: See Δ P charts on page 14

Fluid Temperature: -40 to +300 °F (-40 to +150 °C)

Ambient Temperature: +32 to +185 °F (0 to +85 °C)

Storage Temperature: -40 to +185 °F (-40 to +85 °C)

Humidity: 0-90%, non-condensing

Material

Housing: 6013-T351 Aluminum; anodized

Turbine Rotor: T416 Stainless steel

Rotor Supports: 6061-T6 Aluminum alloy

Seals: Viton[®] standard; EPR optional

Ball Bearings: 440C Stainless steel

Hub Cones: 6061-T6 Aluminum alloy

Temperature Probe: T303 Stainless steel

Valve: 12L14 Steel body with 303 SS seat

Spool/Sleeve: 12L14 Steel

Magnetic Pick-up:

 Body T303 Stainless Steel

 Nut T303 Stainless Steel

Electronic Case: Cold rolled steel; black zinc plate with clear seal

Ports: SAE Straight thread O-ring boss, female, J1926/1; ISO1179 (BSPP)

Flo-Check® USB Hydraulic System Analyzer

Simultaneously Measures Flow, Pressure and Temperature

SOFTWARE

The Flo-tech Analyzer software provides a real-time graphical and digital interface for monitoring and/or recording pressure, temperature and flow rate parameters from the Hydraulic Analyzer. In addition to the graphical and digital displays, the main screen also consists of a menu bar, buttons with common functions and alarm indicators.

The software offers the following options:

- View real time pressure, temperature, flow rate and power measurements
- Record all measurements to a file
- Choice of recording all measurement points or capturing points manually
- Selection of all measurement units, US or metric
- Ability to adjust display of graph data
- High/Low alarm indicators set by the operator

All measurements taken can be saved once per second to a comma separated value (.csv) file for export into a spreadsheet program. For example, recording for 2 minutes would yield 120 points of data. Even though data points are only recorded once per second, pressure spikes and dips are captured by recording the maximum or minimum pressure during each measurement period. Therefore, the precise shape of the pressure spike is not recorded but its amplitude and the time it occurred are both recorded.

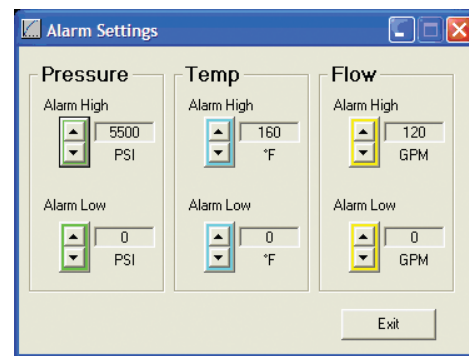

Measurement (over a 1 second time period)	Color Indication	Alarm Indication	Digital Indication	Graphical Display	Record to File
Average Pressure	Green	•	•	•	•
Minimum Pressure	Dark Green			•	•
Maximum Pressure	Dark Green			•	•
Average Temperature	Blue	•	•	•	•
Average Flow Rate	Yellow	•	•	•	•
Average Power	Orange		•		•

Graphs

The graph on the main screen contains more than 60 points of data. Previous data points are saved in memory and can be viewed at any time. Adjustments can be made to optimize data that is displayed by hiding individual graph plots, adjusting the scale of each plot or adding horizontal gridlines to the graph.

Alarms

There are three sets of High/Low alarm indicators on the main screen which monitor pressure, temperature and flow rate. Alarm indicators flash if the current system measurements exceed the alarm limits set by the operator and continue to flash when the current system measurements return to normal to alert the operator that an alarm condition occurred. Alarms must be reset manually to acknowledge the alarm condition.

ORDERING INFORMATION

MODEL NUMBER ¹	NOMINAL PORT SIZE	FLOW RANGE
F7160	SAE 16	3 - 85 GPM
F7161	SAE 24	7 - 199.9 GPM
F7162	G 1	15 - 321 LPM
F7163	G 1-1/2	26 - 757 LPM

¹ Each Flo-Check Hydraulic System Analyzer includes a 16.4 ft. (5 M) USB, A male to B male (IP 68) connection cable, CD-Rom of the software utility, and complete operating instructions packaged in a protective carrying case.

ACCESSORIES

MODEL NUMBER	DESCRIPTION	MODEL NUMBER	DESCRIPTION
F001109	5-Point Calibration Certificate ²	F1614-7500	Pressure Relief Disc, 7500 PSI (1 per Tester)

² Certificates are traceable to NIST, ISO 9001.

PFM6 Digital Portable Hydraulic Tester

Simultaneously Measures Flow, Pressure and Temperature

- Five flow ranges
- Large 3-1/2 digit LCD for flow and temperature
- Helical tube pressure gauge
- One toggle switch to control power and select flow and temperature
- Loading valve with fingertip control of pressure
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- Available with SAE or BSPP ports
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy $\pm 1\%$ of full scale
- Repeatability $\pm 0.2\%$

The PFM6 Series is a compact, lightweight portable tester designed for fast diagnostic troubleshooting of all types of mobile or stationary hydraulic systems and components. These self-contained testers feature laboratory accuracy and provide flow, pressure and temperature measurements simultaneously from one point.

Simple operation includes a toggle switch to display either flow or temperature readings and a loading valve that operates with fingertip control. The dual scale helical tube pressure gauge offers pulsation dampening and high overpressure capacity. For safe operation, all testers include an internal pressure relief system.

SPECIFICATIONS

Performance

Flow Accuracy:	$\pm 1\%$ of full scale
Repeatability:	$\pm 0.2\%$
Turbine Response:	$\leq 200\text{ms}$
Temperature:	
Fluid	-4 to +300 °F (-20 to +150 °C)
Ambient	-4 to +131 °F (-20 to +55 °C)
Flow Readout:	Linearity and zero shift ± 1 digit
Operating Pressure:	up to 6000 PSI (414 Bar, 41.4 MPa, 420 kg/cm ²)
Pressure Drop:	See ΔP charts on page 14
Readout Accuracy:	± 1 digit

PFM6BD Bi-Directional Hydraulic Tester

Simultaneously Measures Flow, Pressure and Temperature

- Bi-directional in-line testing capabilities in three flow ranges
- Large 3-1/2 digit LCD for flow and temperature
- Helical tube pressure gauge
- One toggle switch to control power and select flow and temperature
- Loading valve with fingertip control of pressure
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- SAE ports
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy $\pm 1\%$ of full scale
- Repeatability $\pm 0.2\%$

The PFM6BD Series includes all the features of the standard PFM6 Series with the added benefit of bi-directional flow measurement. Designed for fast diagnostic troubleshooting of all types of mobile or stationary hydraulic systems and components, these compact testers offer laboratory accuracy and provide flow, pressure and temperature measurements simultaneously from one point.

SPECIFICATIONS

Performance

PFM8 Digital Hydraulic Tester & Dynamometer

Simultaneously Measures Flow, Pressure, Power and Temperature

- Five flow ranges
- Front panel selectable US or metric readings
- Dynamometer reads power (HP & kW) directly
- 3-1/2 digit LCDs for digital display of flow, temperature, pressure and power
- Large easy-to-use membrane switch
- Loading valve with fingertip control of pressure
- Silicon strain gauge pressure sensor
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy $\pm 1\%$ of full scale
- Repeatability $\pm 0.2\%$

The all digital PFM8 Series combines a compact, lightweight hydraulic tester and a dynamometer in one unit. Designed for fast diagnostic troubleshooting of all types of hydraulic systems and components, including engine-pump combinations. These testers make all flow, temperature, pressure and power measurements from one point. A bonus feature of this series is the capability to switch from US to metric units of measure in the field.

Each tester utilizes two digital displays, one for flow and temperature and a second display for pressure and power. Simple operation includes a large format membrane switch for on/off control and selection of units of measure to be displayed. A loading valve with fingertip control and an internal pressure relief system are standard features.

Sensor Array with Load Valve

Simultaneously Measures Flow, Pressure and Temperature

- Four flow ranges
- Analog (4-20 mA or 0-5 VDC) or pulse output for flow rate
- Silicon strain gauge pressure sensor with 4-20 mA output
- Platinum resistance temperature sensor with 4-20 mA output
- Loading valve with fingertip control of pressure
- Pressure surge protection
- Turbine flow sensor provides fast response
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy $\pm 1\%$ of reading @ 32 cSt
- Repeatability $\pm 0.2\%$

The Sensor Array is used for diagnostic evaluation of hydraulic motors, pumps, valves, hydrostatic drives and cylinders. When performed as part of a routine preventative maintenance program, catastrophic or untimely repairs are minimized. All that is required is to make quick and easy fluid line connections between the sensing array and appropriate locations in the hydraulic circuit. The load valve is used to create a restriction so that a relief valve setting or internal leakage of a valve or hydraulic cylinder can be determined. The efficiency of a hydraulic pump or motor can be similarly established and compared to factory specifications.

Flow vs Pressure Drop Charts

Flo-Check USB, PFM Series and F6100 Sensor Arrays

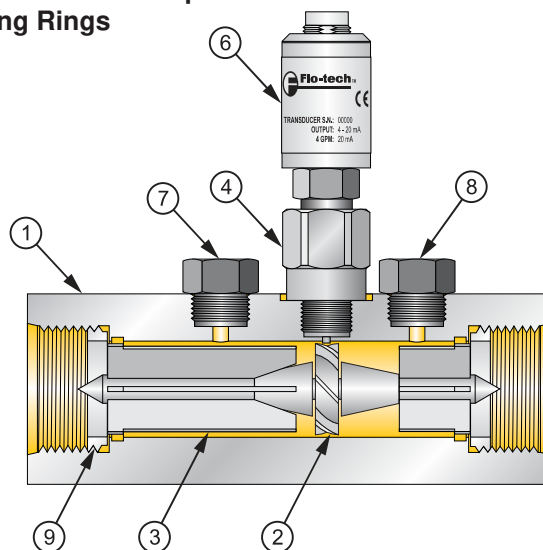

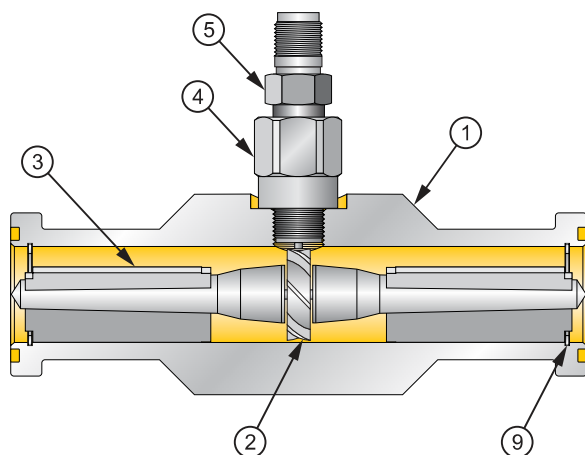

Turbine Flow Sensors

General Design Features

- 1 – Housing
- 2 – Turbine Rotor
- 3 – Rotor Supports
- 4 – Lock Nut
- 5 – Magnetic Pick-up (frequency output)

- 6 – Signal Converter (analog output)
- 7 – Pressure Port Adapter
- 8 – Temperature Port Adapter
- 9 – Retaining Rings

Operating Principle

Turbine flow sensors measure the flow rate of hydraulic fluid and compatible liquids. As fluid flows through the sensor it turns the turbine rotor, and as the turbine blades pass the magnetic pick-up a frequency signal is generated. This frequency signal is proportional to the flow rate and can be transmitted to Flo-tech's digital displays or converted to an analog output. Optional sensors allow measurement of pressure and temperature.

Rugged Construction: Flow sensors are constructed of anodized aluminum and Stressproof® steel with SAE; BSPP; Code 61; and Code 62, 4-bolt flanged ports. The flow sensors have a fluid temperature range of -4 to +300 °F, and are available in pressure ratings up to 6000 PSI.

Flow Straighteners: While flow straighteners are manufactured into each sensor, it is recommended that at least 10 port diameters of upstream pipe with no obstructions to the flow sensor and at least 5 port diameters downstream pipe be provided to obtain laminar flow.

Filtration: All applications should be filtered to at least 40 micron. Placing the flow sensor at a higher elevation in the system will avoid collection of debris, sediment, and dirt in the sensor.

Bi-directional flow capability: Turbine flow sensors are inherently bi-directional, as the turbine will function normally in reverse condition. Flo-tech does not guarantee accuracy in reverse flow. However, it is generally in the range of $\pm 1.5\%$ to $\pm 2\%$ full scale. If required, a reverse flow calibration is optional.

Accuracy: The flow sensors have a forward flow accuracy of $\pm 1\%$ full scale while monitoring hydraulic liquids with viscosity and specific gravity similar to factory calibrated fluids. Flow sensors that include the Intelligent Frequency Converter (IFC) are capable of even greater accuracy.

Repeatability: Flow sensor repeatability is within $\pm 0.2\%$. This is particularly important in cyclical applications which require consistent readings.

Linearization: When used with the Intelligent Frequency Converter (IFC) and/or Flo-tech digital displays, accuracy can be improved by up to 4 times through the linearization of 10 points of flow data.

Calibration: Flow sensors are calibrated with 0.876 specific gravity, 150 SUS (32 cSt) hydraulic oil, irrespective of final fluid use. Three points of calibration data are provided with each turbine flow sensor. Optional 5- and 10-point calibration certification is also available.

Viscosity: The functional range of the turbine flow sensors is approximately 25 to 500 SUS (2 to 110 cSt).

Activa™ Sensor Array

Simultaneously Measures Flow, Pressure and Temperature

- Four flow ranges
- Turbine flow measurement
- IFC converter with 4-20 mA or 0-5 VDC output for flow rate
- 4-20 mA output for temperature and pressure
- Pressures up to 5800 PSI (400 Bar)
- Temperatures up to 300 °F (150 °C)
- Available with SAE or BSPP ports
- Flow accuracy $\pm 1\%$ of reading @ 32 cSt
- Repeatability $\pm 0.2\%$

The Activa Sensor Array provides flow, temperature and pressure signals in a compact unit that requires only one hydraulic line break. Each sensor transmits an output signal that is easily integrated with PCs, PLCs, recorders or panel displays. Signals can also be transmitted to Flo-tech's F6700/F6750 Series digital displays.

Typical applications include fluid characteristic measurement on test stands, stationary hydraulic system monitoring, feedback for hydraulic system control, advance warning of impending component failure and mobile hydraulic system diagnosis.

Ultima Sensor Array

Simultaneously Measures Flow, Pressure and Temperature

- Four flow ranges
- Turbine flow measurement
- Standard magnetic pick-up with frequency output for flow rate
- 4-20 mA output for temperature and pressure
- Pressures up to 5800 PSI (400 Bar)
- Temperatures up to 300 °F (150 °C)
- Available with SAE or BSPP ports
- Flow accuracy $\pm 1\%$ of full scale
- Repeatability $\pm 0.2\%$

The Ultima Sensor Array provides flow, temperature and pressure signals in a compact unit that requires only one hydraulic line break. The magnetic pick-up generates a frequency output for flow rate measurement while the pressure and temperature sensors provide 4-20 mA output signals. The flow signals can be transmitted to Flo-tech's F6600/F6650 Series, and the temperature and pressure signals can be transmitted to the F6700/F6750 Series digital displays or any other instruments that accept a frequency or 4-20 mA signal.

Typical applications include fluid characteristic measurement on test stands, stationary hydraulic system monitoring, feedback for hydraulic system control, advance warning of impending component failure and mobile hydraulics system diagnosis.

Quad Series Turbine Flow Sensor

Provides Bi-directional Flow Rate Measurement

- Four flow ranges
- Bi-directional turbine flow measurement
- High strength aluminum bodies
- Flow accuracy $\pm 1\%$ of full scale for both forward and reverse flow
- Repeatability $\pm 0.2\%$
- Pressures up to 5000 PSI (345 Bar)
- Temperatures up to 300 °F (150 °C)

Derived from the FSC Series, the F2000 Quad Series of flow sensors utilizes two flow transducers which are 90-degrees electrically out of phase from each other. With the addition of a second flow transducer, it is possible to monitor flow in both directions. The F2000 Quad is suitable for up-down counters that can discern the leading and trailing edges of the quadrature signals.

Current applications include using the F2000 as a speed-sensing device on mobile equipment. This bi-directional flow sensor can be used as a governor, sending frequency signals back to a PLC which enable it to make the necessary adjustments. Other functions of the flow sensor are in linear applications where accurate positioning is required.

SPECIFICATIONS

Performance

Forward and Reverse Flow

Accuracy:	$\pm 1\%$ of full scale
Repeatability:	$\pm 0.2\%$
Turbine Response:	$\leq 200\text{ms}$
Temperature:	
Fluid	-4 to +300 °F (-20 to +150 °C)
Ambient	-4 to +131 °F (-20 to +55 °C)
Operating Pressure:	5000 PSI (345 Bar) maximum
Pressure Drop:	See ΔP charts on page 24
Magnetic Pick-up:	
Electrical Output	
Signal	Self-generating alternating pulse 100 mV RMS (100 Hz) minimum

Material

Housing:	6013-T651 Aluminum; anodized
Turbine Rotor:	T416 Stainless steel
Ball Bearings:	440C Stainless steel
Rotor Shaft:	T303 Stainless steel
Rotor Supports:	6061-T6 Aluminum alloy CA360 Brass
Hub Cones:	6061-T6 Aluminum alloy
Retaining Rings:	Steel; zinc plate
Seals:	Buna N standard; Viton® and EPR optional
Magnetic Pick-ups:	
Body	T303 Stainless Steel
Nut	T303 Stainless Steel

Ports:	SAE J1926/1

Turbine Flow Sensors

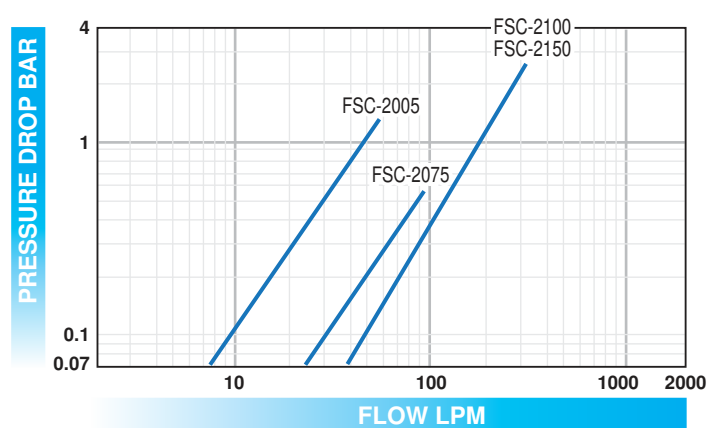

Activa™ and Ultima Sensor Arrays

Classic Flow Sensors

Quad Flow Sensors

K-Factor Scaler

Frequency Divider

SPECIFICATIONS

External Power:

Input Voltage	8.5 to 30 VDC, diode protected
Maximum Current Draw	18 mA, using internal resistor @ 30 VDC input

Inputs:	Magnetic pick-up
Frequency Range	0-4000 Hz
Trigger Sensitivity	30 mV p-p to 30 V p-p

Output Signal:	30 VDC max voltage (open collector transistor) 0.25 W max power
Pulse type, using internal pull-up resistor;	
V_H	= power input voltage - 0.7 VDC
V_L	= less than 0.4 V @ max input power
Pulse type, using external pull-up resistor;	
V_H	= input voltage to external pull-up resistor
V_L	= $[V_H / (\text{selected resistor value} + 47\Omega)] \times 47\Omega$
Pulse length;	150 μ s, 1ms, 25ms, 100ms, 500ms, 1s or auto mode selectable

Internal Pull-up

Resistor:	Jumper disable option 3.6K Ohm
------------------	--------------------------------

Operating

Temperature:	-22 to +158 °F (-30 to +70 °C)
---------------------	--------------------------------

Enclosure:	UL 94-5VA flame retardant ABS with mounting flanges
-------------------	---

DIMENSIONS - Inches (mm)

- Pre-amplifier for low level turbine meter
- Interface for pulse output devices to PLC, RTU, PC data acquisition card or similar devices
- Scale turbine meter output to desired engineering units
- On board microcontroller
- Internal or external pull-up resistor
- Compact ABS enclosure with mounting flanges
- Field adjustable (with optional software)
- K-factor range 1- 999,999,999

The K-Factor Scaler is a field adjustable frequency divider that converts the low level frequency output from a turbine meter into a scaled square wave output signal. This amplified, square wave output signal will interface with any frequency or counter input data collection device.

Due to the low level frequency signal of the FSC-375 and the Ultima F6202-F and F6222-F series turbine meters, the K-Factor Scaler is required to amplify the signal of these turbine meters for transmission to the Flo-tech F6600 and F6650 Series digital displays.

The K-Factor Scaler is also capable of converting the frequency output of a turbine meter into a different frequency, representing another unit of measure, such as liters, barrels, cubic feet, etc. This requires the optional programming software kit and the K-factor information unique to the turbine meter.

ORDERING INFORMATION

MODEL	PART NUMBER
K-Factor Scaler	F5140
Programming Software Kit	F5141

Pressure Sensor F6301 Series

With 4-20 mA Output

- 4-20 mA electrical output
- Long-term stability & repeatability
- Wide range of pressure ratings
- Stainless steel NEMA 4X enclosure

The F6301 Pressure Sensors utilize polysilicone strain resistors to create very low noise levels with very high signal output. The metal diaphragm and polysilicone bridge are unaffected by shock, vibration or mounting position.

SPECIFICATIONS

Overpressure:

Full scale in PSI	0-15 to 0-2000	0-3000 to 0-5000	0-6000 to 0-15,000
Proof	200%	150%	120%
Burst	800%	300%	150%

Accuracy:

±1% of full scale
Non-linearity ±0.7%
Hysteresis ±0.2%
Non-repeatability ±0.07%

Durability:

108 cycles 20/80% full scale with negligible performance change

Response Time:

<5ms

Environmental Effects:

Humidity	No performance effect at 95% relative humidity, non-condensing
Position Effect	<0.01% full scale

Temperature:

Storage	-65 to +250 °F (-54 to +121 °C)
Operating	-20 to +180 °F (-29 to +82 °C)
Compensating	-20 to +160 °F (-29 to +71 °C)

Thermal Coefficients (68 °F ref.) % full scale / °F Standard:

Zero	±0.04%
Span	±0.04%

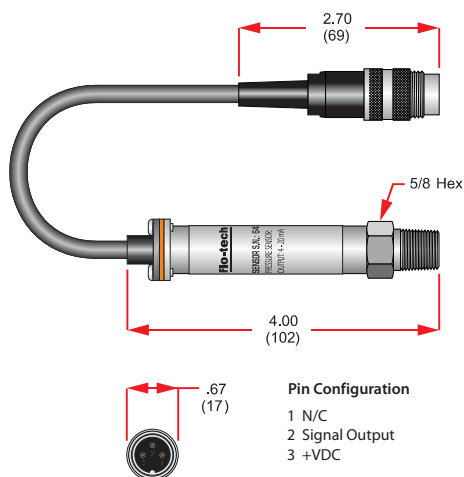

Vibration Sweep:

<±0.1% full scale effect for 0-2000 Hz at 20 g's in any axis

Shock:

<±0.5% full scale effect for 100 g's, 20 ms shock in any axis

DIMENSIONS - Inches (mm)

Power Requirements: 10-36 VDC unregulated
4-20 mA reverse polarity protected

Circuit to Case

Insulation Resistance: 100 M Ohms @ 50 VDC

Electrical Output:

Signal 4-20 mA (2 wire)

Physical:

Enclosure NEMA 4X
Weight 2 oz (approximate without cable)

Materials:

Case 300 Series stainless steel
Cable #24 AWG, 36" PVC, shielded, vented, UL approved
Diaphragm 17-4 PH stainless steel
Connection 1/4 NPT male

Temperature Sensor F6310 Series

With 4-20 mA Output

- RTD temperature element
- 4-20 mA electrical output
- Temperatures up to +350 °F (+176 °C)
- Withstands pressures up to 6000 PSI (414 Bar)

These two-wire platinum RTD (resistance temperature detector) sensors with 4-20 mA output are designed for direct insertion into high pressure fluid systems without need for special pressure fittings. They are ideal for indicating system operating conditions, temperature testing and process measurements and control.

DIMENSIONS - Inches (mm)

SPECIFICATIONS

Temperature Range:

Ambient	-40 to +185 °F (-40 to +85 °C)
Fluid	-40 to +350 °F (-40 to +177 °C)

Accuracy:

See Sensor Accuracy vs Temperature Chart below

Current Span Range:

4-20 mA

Response Time:

3 seconds

Maximum Pressure:

6000 PSI (414 Bar)

Operating Loop Voltage:

Minimum	9V + Voltage of load resistor at 20 mA
Maximum	28V
Min Load Resistance	10 Ohms
Max Load Resistance (including wiring losses)	$\frac{\text{Loop Voltage} - 9V}{20 \text{ mA}} = \text{Ohms}$

ORDERING INFORMATION

MC4000 Diagnostic Test Equipment

Simultaneously Measures Flow, Pressure, Temperature, and Speed

- Hand-held hydraulic analyzer offers instant and recordable diagnostics
- Hydraulic horsepower calculation
- Measures fast transients
- Flow sensor linearization
- 2.5 MB data logging capacity
- Five sensor inputs, including:
 - Turbine Flow Sensor
 - Two Pressure Sensors
 - Temperature Sensor
 - RPM Speed indicator

ORDERING INFORMATION

DIMENSIONS - Inches (mm)

ACCESSORIES

A comprehensive set of accessories is available for the MC4000. Use these accessories to expand the capabilities of the MC4000. For a complete list of available accessories see document TUR-PL-00031-EN.

Hydraulic Formulas and Viscosity Information

Flow Rate Formulas			
Frequency (Hz)	=	$\frac{K \times \text{GPM}}{60}$	GPM = $\frac{\text{Hz} \times 60}{K}$
K factor (K)	=	$\frac{\text{Hz} \times 60}{\text{GPM}}$	Time Base (TB) = $\frac{\text{GPM}}{\text{Hz}}$

Flow Rate Related Formulas	
Valve C _v Factor	= $\frac{\text{Flow Rate (GPM)} \times \sqrt{\text{Fluid Specific Gravity}}}{\sqrt{\Delta P \text{ across valve (PSI)}}$
Cylinder Velocity	= $\frac{0.3208 \times \text{Flow Rate (GPM)}}{\text{Net Cylinder Area (in}^2\text{)}}$
Fluid Motor Torque	= $\frac{\text{Flow Rate (GPM)} \times \text{Pressure (PSIG)} \times 36.77}{\text{Rotational Speed}}$

Power Calculations		
H.P. = $\frac{\text{GPM} \times \text{PSI}}{1714}$	H.P. = $\frac{\text{LPM} \times \text{Bar}}{447.4}$	kW = $\frac{\text{LPM} \times \text{Bar}}{600}$

Fluid Viscosity Conversion Table
